Concept in English	<i>Add the Concept in your Language</i>	Picture
Percentage (percent) Refers to the share of something measured in points per hundred. For example, if half the students in a class are females then the percentage of females in the class is fifty.		 An illustration of a person with blonde hair and a purple tunic standing behind a wooden stall. The stall has a striped awning. On the stall, there is a large yellow bag with a '%' symbol on it. Below the bag, a sign reads 'Percent = hundredth'. The background shows a classical building with columns and a green landscape.
Division (divide) The process of finding out how many times one number is contained in another.		 An illustration showing a division equation: $\frac{\text{Part}}{\text{Whole}} =$ Below the equation are six stacks of gold coins, each stack containing five coins.
