

Binogi Video: Chromosomes and Traits
 English-Add a Language Bilingual Concept List
The Escape Projects

Concept in English	<i>Add the Concept in another Language</i>	Picture
<p>Gene(s) The part of a cell that determines its development, appearance and functions and is the basic unit by which genetic information is passed from parent to offspring.</p>		
<p>Chromosome(s) A structure in the cell that is made up of long double spirals of DNA, where our genes are found. Upon cell division, the chromosomes are separated.</p>		
<p>Inherit (Inherited) Something that is passed from the parents to their offspring.</p>		
<p>Cell Nucleus The central part of the cell where the cell's development and functions are controlled.</p>		
<p>DNA (Deoxyribonucleic Acid) Molecules that carry genetic information. They act like a blueprint for the structure of all organisms.</p>
